

CASE STUDY

A Newterra Solution Offers a "Perfect Fit" for This Client's Expansion

Clear³ MBR technology is deployed as a technological upgrade to accommodate major growth at a busy hatchery allowing it to achieve strict discharge requirements.

Market Served: Commercial Poultry Hatchery
Application: Industrial Wastewater Treatment
Location: British Columbia (Canada)
Challenge: Treatment for Strict Discharge Levels
Solution/Service: Membrane Bioreactor (MBR) System

Summary

To accommodate growth, a commercial hatchery needed to expand its BC facility to accommodate increased hatching of turkeys and broiler chicks and remodel the original hatchery to accommodate the addition of new equipment. The operation runs continuously, 365 days per year, producing 20 million broilers and 2 million turkeys annually.

The Challenge

Proper wastewater treatment (wash water) in a poultry hatchery is beneficial in many ways, such as protecting the environment, safeguarding human health, regulatory compliance, conserving resources, controlling odors, and promoting overall sustainability in poultry production.

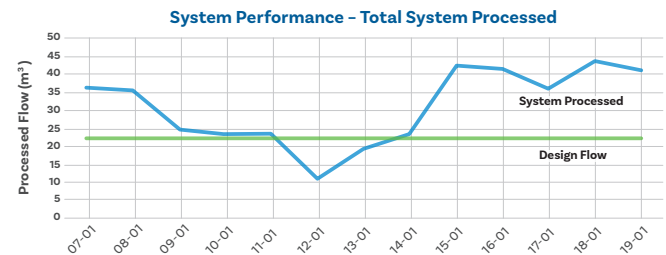

The current treatment of the hatchery's wash water had been addressed by an aging Rotating Biological Contactor (RBC) System that desperately needed replacement. The hatchery needed a better alternative to meet the strict discharge requirements that would allow effluent of sufficient quality to continue direct discharge into the local watershed under new, more stringent environmental requirements. Wash down water from the hatchery is high in BOD (Biochemical Oxygen Demand) and solids, as well as ammonia, thus requiring the inclusion of an Anoxic Tank in the treatment process.

The Solution

The Newterra Clear³ Membrane Bioreactor (MBR) System was ultimately selected for the hatchery based on the ability to maintain

all required discharge levels even when run for short periods at more than double the design flow. In addition, Newterra was able to offer technical expertise, manufacturing capability, and lifecycle equipment support for the long-term.

The Clear³ MBR System offers a compact footprint and is housed in an ISO-certified container for easy set-up. The membrane tanks feature side door access to the modules which simplifies periodic maintenance and eliminates the need for roof access. The Clear³ MBR System even maintains all required discharge levels - even when running at more than double the 5,811 gpd/day (22 m³/day) design flow of the system. (See chart below)

Complete Support for the Food and Agriculture Industry

Newterra empowers industry to meet regulatory compliance and surpass environmental discharge regulations, shielding your company from legal issues and fines. Simultaneously, it fosters resource conservation through water recovery and reuse, contributing to sustainability and cost savings by reducing freshwater demand.

From Source to Solution – Choose Newterra

Your trusted partner for comprehensive environmental solutions

With **technology brands whose histories expand back for more than 150 years**, Newterra has steadily grown from its roots to become a global solutions provider in water and wastewater treatment. Our journey is a testament to our deep understanding of the multifaceted challenges across various markets and applications.

Our “One Newterra” ethos is a commitment to providing a comprehensive array of technical solutions, ensuring we address the full spectrum of our clients’ needs. This dedication extends beyond technology, as we nurture enduring partnerships with our clients, standing by them throughout every phase of their challenges. At the heart of Newterra is our unwavering commitment to sustainability.

Our people, our technologies and our practices contribute meaningfully to a sustainable and brighter future.
